Introduction

Tetra Pak CPS Ltd is a metal fabrication business which is committed to running all its activities in an environmentally sound and sustainable manner. We set goals for continuous improvement in our engineering design and manufacturing activities.

Policy

Commitment to Environmental Sustainability

We consider environmental management an important priority and thus establish procedures, programmes and practices for conducting operations in an environmentally sound manner.

As part of that commitment we strive to:

- Take a long term and life cycle view
- Continually improve environmental performance
- Achieve pollution prevention
- Meet or exceed internal guidelines, standards and requirements, relevant environmental legislation, and all other external requirements to which we have subscribed
- Understand and manage responsibly areas of environmental risk and uncertainty as well as the known environmental aspects of our products and processes
- Fully integrate environmental considerations into all strategic management decisions, policies, programmes and practices across our business
- Communicate openly and credibly with our stakeholders and report regularly on our performance
- Be responsive to any request for environmental information from any source
- Acknowledge that our operations have an impact on the environment that must be balanced with the benefits our products and services bring to society

Society

As good corporate citizens, we maintain open lines of communications on key environmental matters with the communities in which we operate.

Customers

We offer systems that are designed considering:

- Energy usage
- Water/effluent usage
- Product wastage

In particular we offer:

- HTST pasteurisers with up to 90% regeneration
- Cleaning In Place (CIP) with reclaim (i.e. final rinse water saved to use as pre-rinse on next cleaning cycle)
- CIP systems which recirculate hot detergent, conserving energy and minimising both water and chemical usage

We encourage our customers to share with us their concerns regarding environmental issues related to our products, equipment and services, and will facilitate discussion on options to address those issues.

Transportation

We aim at managing and reducing the environmental impact of the transportation related to our activities and products including transportation into, within and from Tetra Pak CPS Ltd. Our environmental management systems include transportation. We shall take the impact on the environment into consideration when deciding on or changing of transportation modes and logistics.

We shall also take account of environment when planning and arranging travel, and we make use of network and telephone conferencing whenever possible.

Manufacturing/Operations

We strive for environmental excellence in our operations. We therefore commit to developing, designing and conducting our operations in a manner that:

- Minimises environmental impacts
- Promotes the efficient use of resources
- Reduces our contribution to climate change
- Manages waste properly, including maximising recycling of scrap material

Our factory shall have an environmental management system certified to ISO 14001.

Employee Environmental Engagement/Participation

Meeting our environmental goals requires everyone in the company to assume responsibility. Every individual is expected to contribute to achieving our plans and goals by proactively taking initiative in line with our environmental policy.

Managers and Team Leaders are responsible for ensuring that employees are supported and empowered to implement and meet the policy requirements in their work.

We openly share environmental knowledge, best practices and information on our environmental performance. We provide environmental training to ensure our employees execute their duties with the least possible environmental impact.

Supplier Management

Since we attach importance to environmental management, we insist on the same from our suppliers.

Environmental requirements are taken into consideration in the development of our supply base.

Mark Boxall
Managing Director
